

CHAPTER – 01

INTRODUCTION

1.1 – Project Overview

Product placement is really important for businesses. It is the process of looking at how the position of products in a store affects what customers buy how visible the products are and how well they sell. When products are placed in a spot it helps businesses get the attention of customers makes shopping easier and more fun and helps them make more money. By looking at things like what kind of product it's how much it costs if there are any promotions, who the customers are and how many people walk by businesses can figure out the best way to place their products to sell more and make customers happy.

This project uses Tableau to look at and analyze data about product placement with dashboards. The analysis gives us information that helps businesses make good decisions based on facts and figures and it helps them put their products in the best spot to sell well and make a profit.

Key Points

- Sees how many people walking by affects sales.
- Checks if promotions and discounts are working.
- Compares prices, with what other businesses charge.
- Makes the store layout and shelf space better.
- Helps businesses make decisions.
- Finds products that sell well.
- Gives us information through Tableau dashboards.
- Makes customers happier and more engaged.
- Makes businesses run smoothly and make more money.
- Helps businesses beat their competition.
