

CHAPTER – II

IDEATION PHASE

1.2 – Purpose of the Project

Strategic Product Placement is about putting products in the spots to get people to see them buy them and help the company sell more. The main goal of Strategic Product Placement is to make sure that the right product gets to the person at the right time and place.

Key Purposes

- **Increase Product Visibility:** We want to make products stand out so customers can see them.
- **Boost Sales Revenue:** We want to get people to buy things and make the company more money.
- **Enhance Customer Experience:** We want to help people find what they need easily.
- **Optimize Shelf Space:** We want to use the space in the store
- **Promote High-Priority Products:** We want to show off products, products that are only available for a short time and products that are on sale.
- **Influence Customer Buying Behavior:** We want to get people to buy things on a whim and come back to buy more.
- **Improve Product Accessibility:** We want to put products where people can see them and get to them easily.
- **Support Marketing Strategies:** We want to put products where they will be seen during promotions.
- **Analyze Consumer Preferences:** We want to understand what people like and what they buy.
- **Gain Competitive Advantage:** We want to make our products stand out from what other companies are selling so we can sell more.

The purpose of Strategic Product Placement is to put products in the spots to get people to see them get their attention make shopping easier and sell more products to make the company more money by using good merchandising and making decisions based on data, about what people buy.

Strategic Product Placement Analysis using Tableau

The primary purpose of Strategic Product Placement Analysis using Tableau is to analyze sales, customer behavior, and product performance data to determine the most effective placement of products within stores, websites, or marketing campaigns. By using Tableau's powerful data visualization capabilities, organizations can transform complex datasets into interactive dashboards and meaningful insights.

This analysis helps businesses identify high-performing products, understand customer purchasing patterns, and optimize product positioning to increase visibility and sales. Tableau enables decision-makers to monitor key performance indicators (KPIs), compare product categories, and evaluate the effectiveness of different placement strategies through visual reports and charts.

Additionally, Strategic Product Placement Analysis assists retailers and marketers in improving inventory management, enhancing customer experience, maximizing revenue, and making data-driven decisions. By leveraging Tableau dashboards, businesses can quickly identify trends, opportunities, and areas for improvement, leading to more efficient product placement and increased profitability.

Overall, the purpose of Strategic Product Placement Analysis using Tableau is to support smarter business decisions through data visualization, helping organizations improve product visibility, customer engagement, and overall sales performance.
