

Strategic Product Placement Analysis using Tableau

TEAM ID	SWTID-2026-8765
PROJECT TITLE	Strategic Product Placement Analysis using Tableau
MAX MARKS	2 MARKS

3.2 – Solution Requirement

The Strategic Product Placement Analysis solution is designed to look at how products are selling how customers behave what prices are set what promotions are run and how many people are walking into stores to figure out the best way to place products. To make this solution work we need to do a things.

1. Functional Requirements

- We collect information about each product like the product identifier, what kind of product it's where it is placed and how much it costs.
- We collect information about any promotions or discounts we offer.
- We collect information about how many people walk into our stores.

2. Non-Functional Requirements

- We need to be able to handle a lot of information without slowing down.
- We need to make sure the information is accurate and consistent.
- The dashboards need to be accurate and not have any errors.

3. Hardware Requirements

- We need least 4 gigabytes of memory but 8 gigabytes is recommended.
- We need least 50 gigabytes of free space on the hard drive.
- The screen needs to be least 1366 by 768 pixels.

4. Software Requirements

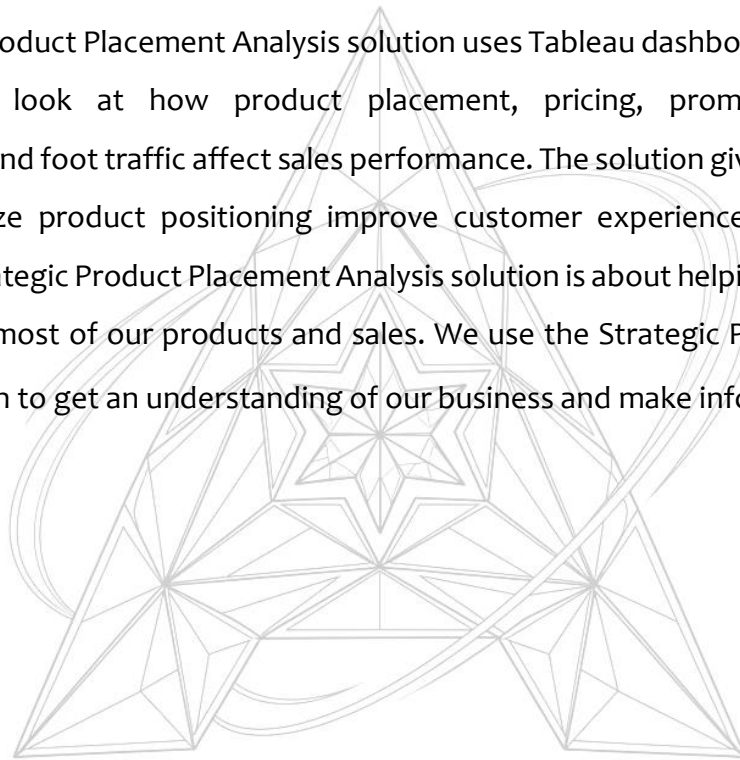

- We need Windows 10 or 11 as the operating system.
- We need Tableau Desktop and Tableau Public.

- We need Microsoft Excel or a program that can read CSV files.

5. Expected Outputs

- We will get a report that shows how product placement affects sales.
- We will get a report that shows the sales for each product category.
- We will get a dashboard that shows how foot traffic affects sales volume.

The Strategic Product Placement Analysis solution uses Tableau dashboards and analytical techniques to look at how product placement, pricing, promotions, customer demographics and foot traffic affect sales performance. The solution gives us insights that help us optimize product positioning improve customer experience and make more money. The Strategic Product Placement Analysis solution is about helping businesses, like ours make the most of our products and sales. We use the Strategic Product Placement Analysis solution to get an understanding of our business and make informed decisions.
