

CHAPTER – IX

ADVANTAGES & DISADVANTAGES

9.1 – Advantages

Advantages of Strategic Product Placement Analysis

Strategic Product Placement Analysis is really helpful for businesses to figure out where to put products so they sell more and people like them.

1. Increases Sales Volume

- When you put products where people can see them they are more likely to buy them. This makes it more likely that people will buy things and it helps sell products overall.

2. Improves Customer Experience

- People can find what they need easily when products are placed in a way. This makes shopping easier and more organized for people.

3. Optimizes Shelf Space

- This helps stores use the space they have on shelves in a way. It makes sure that products that sell well are put in spots.

4. Enhances Product Visibility

It finds the best places to put products like:

- * End-caps
- * Front-of-store displays
- * Eye-level shelves

5. Supports Data-Driven Decisions

- It uses information about sales and the people who shop at the store to make decisions. This means that stores do not have to guess what will work and what will not.

6. Improves Marketing Effectiveness

- It looks at how promotions and displays work to sell products. This helps stores figure out what kind of promotions work the best.

7. Better Understanding of Customer Behavior

- It looks at how different groups of people react to where products are placed. This helps stores make plans that're just for certain groups of people.

8. Competitive Advantage

- It compares how much products cost and where they are placed to what other stores do. This helps businesses put their products in spots than other stores.

9. Increases Return on Investment (ROI)

- It helps stores make the money from the space they have. It also saves money by not wasting it on displays that do not work.

10. Identifies High-Traffic Areas

- It uses information, about where people walk in the store to find the spots. This helps put products in the spots where the most people will see them.
